DETAILED ACTION

Inventorship

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Specification

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Objections

Claims 7 and 11 are objected to because of the following informalities:

Claim 7, line 7 of page 51; the term "is not interfered" is improper grammar, and

Claim 11, line 22; the term "said a lower limit" is improper grammar.

Application/Control Number: 10/791,820

Art Unit: 3653

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patent Number US 6494,453 B1 by Yamada et al. The ejection tray configuration disclosed by said '453 patent incorporates tray 1, tray 2, ejector rollers 9 and CPU 102 that read on the Applicant's first tray, second tray, outlet and controller, respectively. Said patent further discloses two standby positions (one above tray 1 and the other below tray 2) that read on the Applicant's standby positions. Although said patent fails to specifically state that the distance between the ejector rollers 9 (outlet) and the top surface of sheets stacked in tray 2 is a predetermined distance, it does disclose a sensor SN10 that "detects the position of ejection tray 2" (column 9, lines 34 plus) at the retraction position of said tray. Since the sensor SN10 is stationary, it would have been obvious to one of ordinary skill at the time of the invention to stop said tray at a predetermined distance from the rollers 9 (outlet).

Regarding claims 7-10, said '453 patent further discloses sensor SN6, motor 31, sensor SN7, sensor SN10 and CPU 102 that reads on the Applicant's sheet surface

Application/Control Number: 10/791,820

Art Unit: 3653

detecting device, height control means, retracted position detecting means, movement distance detecting means and retraction controlling means, respectively.

Regarding claims 8, 10 and 14, the use of a timing device is an obvious means to determine a mechanical element displaced via a constant speed motor.

Regarding claim 12, said patent further discloses sensor SN9 that reads on the Applicant's pre-lower-limit detecting means.

Conclusion

The following prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Patent Number Us 6,631,896 B2 by Yamada et al because of its sensors SN5-SN7,

Patent Number US 6,322,070 B2 by Yamada et al because of its trays 1 and 2,

Patent Number US 6,315,288 B1 by Sugishima et al because of its movable tray

33, and

Patent Number 6,146,085 by Namba et al because of its trays 9a and 9b..

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark J. Beauchaine whose telephone number is (571)272-6934. The examiner can normally be reached on 8:00AM through 5:00PM Mondays through Thursdays.

Application/Control Number: 10/791,820 Page 5

Art Unit: 3653

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Donald P. Walsh can be reached on (571)272-6944. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
